

## PRESS RELEASE

### X-RAY MANUFACTURER LAUNCHES NEW COMBINATION X-RAY SYSTEM IN THE AMERICAS

**February 2, 2015 Irving, Texas.** Mekitec Ltd., the Finnish technology company today announces the launch of a new combined X-ray and Check-weigher in the Americas. The CombiMeki system is a space and cost economical solution to inspect for contaminants, check product features and weigh products in a fully integrated economical solution.

The system integrates a dynamic loadcell into the well proven Meki X-ray inspection software and hardware platform to provide complete online inspection of packaged products. By integrating the units into a common control platform users can benefit from simplified operation and effective reporting to comply with HACCP and FSMA standards.

The company's established Meki line is a range of space and cost economical X-ray inspection solutions designed to help food processors meet and exceed the requirements of the Food Safety Modernization Act (FSMA). The units detect metal, glass, stone and other dense contaminants that may inadvertently find their way into food products. The inspection systems automatically inspect and reject non-conforming products from the production line, thereby protecting the manufacturer and ultimately consumers.

Terry Woolford, Mekitec US GM for the Americas states, "The CombiMeki compliments our range perfectly, our core principles of quality, reliability, ease of use and economy have been adhered to during this development. We have many customers with multiple installations throughout Europe and Asia. We have also designed the system to be very space economical, and it is perfect for high speed packaged products such as found in the snack food industry. I am delighted to offer this all in one solution to customers throughout North and South America."

The company is launching the CombiMeki at West Pack 2015 in Anaheim from February the 10th to February 12th on stand number 4971.

Mekitec Ltd. was established in 2005. The founders of the company have more than 20 years experience in the field of x-ray technologies. Through offices in USA, Europe and Asia, it is expanding its support network globally.

## About Mekitec

Mekitec has a combined experience of several decades in the development, industrialization and manufacturing of X-ray imaging systems, applied in medical, security and safety areas. This unique combination of in-depth knowledge of various industries has enabled the management to invest in long-term research and development especially for the food industry. The results of this focus and dedication are the state-of-the-art X-ray food safety systems that Mekitec supplies to its customers globally.

The product range is a high-performance, user-friendly and very space and cost competitive

X-ray technology system called MEKI. It is revolutionary as it provides 100% food quality control with high precision X-ray inspection that is designed to replace the simple metal detector with a similar investment. What's more, MEKI with its small and compact footprint, easily fits in every production line, thereby saving useful space in the factory.

With the MEKI range, food producers finally have the choice: To enjoy a fully automated, high precision and small yet cost-effective X-ray food inspection system. The groundbreaking MEKI systems provide food quality control without compromise!
