Become the trailblazing Quality Manager

How can the MEKI™ Data Manager help you?
Your food products are inspected with the Mekitec system by analyzing the time-stamped X-ray image of each package. By storing all the images and their related production data collected by the system, you'll have a comprehensive and transparent view of your primary packaged food production.

When using the MEKI™ Data Manager, you'll finally have access to this data and a tool to **create pack-for-pack traceability** and support you with any safety or quality claim – all of this without the need for expensive investments.

MEKI™ Data Manager modernizes and makes the preparation work for any QA audit straightforward - you can **say goodbye to the laborious paperwork** and avoid human-errors with more automated Validation Testing and reporting.

Already, you perform routine Validation Tests to verify the performance of each CCP against the set critical limits. With the Data Manager, you have **a bullet-proof audit trail** and even access to the X-ray images from each test.

- Get an overview of all your products inspected with Mekitec systems
- Create, filter and export precise reports to show what, why, and when food products were rejected from each X-ray equipped production line
- View traceability reports of actual time-stamped X-ray images from the complete production
- Create Validation Test reports for internal and external use, such as audits
- Observe the performance of your Mekitec systems through active reporting

Act faster ▪ Optimize production
Minimize waste ▪ Increase traceability
Save costs ▪ Find inefficiencies
Decrease paperwork

Setting up the Data Manager
- Mekitec X-ray inspection system for data gathering
- An internet access to download the Data Manager software
- Using the latest MEKI X-ray Inspection software offers the best results

Viewing your data
- Offline (e.g. from a external memory)
- Local Area Network (LAN)
- Online (e.g. with VPN connection)

Protecting your data
- The data is not transmitted to any outside parties
- The data cannot be accessed without your explicit permission
- For remote connection, we offer secure point-to-point VPN

The Mekitec Group

Mekitec is a global manufacturer of innovative quality control systems based on X-ray technology for the food industry. We are committed to ensure safe food by providing inspection systems with the best value in the industry.

Our MEKI™ X-ray systems are a part of the food production line guaranteeing the quality by detecting and removing food products that contain unwanted foreign objects or other defects by using the latest X-ray imaging and processing technology, resulting in 100% food quality control.
